Weekly \$1,500 + GST (Does not include data subscription)

Monthly \$2,500+ GST (Does not include data subscription)

*Delivery, Mobilization & Demobilization:
Quote required, location variable*

OFF GRID POWER PLANT

Off grid power plants have an equivalent off grid capacity of a 20 kW generator. The intent of this power plant is to incorporate the storage capability of batteries, mixed with the green properties of solar. In order to minimize generator operation, the combination of the 2 will not only earn you LEED points, but also save you money on your project fuel consumption.

Our team will deliver the facility to your site, set it up and provide a brief "How to" on what you can expect while renting this facility. The facility also comes with a satellite internet connection to provide a complete turnkey setup for your project office.
